

Should this hydropower project keep being developed, who should fund the next stage, who should carry each risk, and is it actually ready for financial close?

Inside the book:

- Three investments in one asset: development option, construction contract, operating annuity
- Developer economics: risk-weighted value, success-path return, co-developer entry
- Debt sizing on the river: P50, one-year and ten-year P90, drought tests and reserves
- The buyer and the state: payment capacity, guarantees, contingent liabilities
- The Hydro Readiness Framework: 8 questions, 23 evidence gates, one close decision
- A technical due-diligence reference and a worked 60 MW case, from site to close

For developers, lenders, development finance institutions, investors and government decision-makers, with questions for the investment and credit committees at the end of every chapter. A companion financial model applies the method.

Book 7 of the Africa Energy Finance collection.

ISBN 979-8178961780

HYDROPOWER DEVELOPMENT AND FINANCE

From River to Financial Close

A Developer, Lender and Government Framework for
Hydropower Projects in Africa

THE HYDRO READINESS FRAMEWORK™

8 Questions · 23 Gates · 1 Financial Close Decision

DEVELOPER · LENDER · GOVERNMENT
