

A practical financial framework for deciding whether a PAYGo solar company can survive growth, absorb credit losses and attract sustainable capital.

Inside the book:

- PAYGo unit economics, from the price plan to lifetime contribution
- Cohorts, repayment curves and the PAYGo PERFORM 2026 KPIs
- Credit losses, receivables and the borrowing base
- Equity, debt, receivables facilities and securitisation
- Stress testing and the investment committee decision

For founders, CFOs, lenders, development finance institutions, impact investors and energy access professionals.

Book 2 of the Africa Energy Finance collection.
